

CD Folder Specifications

1. Size indicated by diagrams correspond to final product. We recommend a 1/8" bleed for cutting purposes.
2. Artwork for folders and inlay cards should be camera ready. Film should be composite negatives, right reading emulsion down, 150 line screen. If composite negatives are provided a color key or match print must accompany the film (not necessary for black and white art).
3. Maximum thickness of folder --- 1.8mm.

*Please note: four color process printing is more technically involved than normal line printing. For best results, supply DEI with original art and layout design. If this is not possible, stringently follow the guidelines above for separations.
